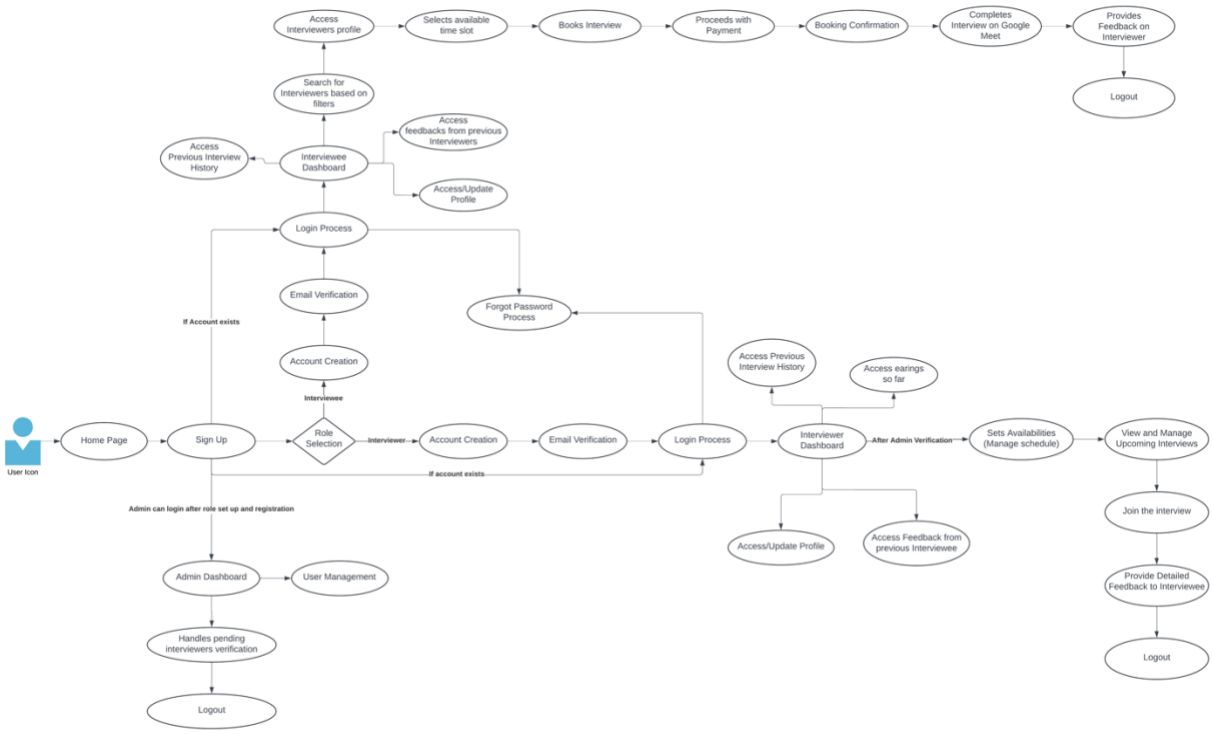
MockXpert User Flow with Current Design Vision

Use Case Diagram



Detailed User Flows

User Authentication Home Page Flow

1. Home Page Overview

- **Goal**: Allow users to scroll through the home page to get an overview of the application.
- **Current Vision**: Include key sections like What is MockXpert, How It Works, Benefits for Interviewees and Interviewers, and possibly some testimonials or use cases.
- Use smooth scrolling between sections with clear calls-to-action (CTA) buttons like “Sign Up” and “Learn More” to encourage user interaction.

2. Sign-Up Button

- **Goal**: Make the “SignUp” button easily visible and accessible.
- **Current Vision**: Place the Sign-Up button in the navigation bar and as a CTA on different sections of the homepage.
- Make sure the button is prominent with clear text (e.g., “Get Started” or “Sign Up Now”) to attract attention.

3. Role Selection (How do you want to use MockXpert?)

- **Goal:** Prompt the user with a role selection question to determine how they will use the platform.
- **Current Vision**: After clicking “SignUp,” the user is redirected to a new page that asks: “How do you want to use MockXpert?”

Display two clear options:

- I am here to interview (Interviewer role).
- I am here to get interviewed (Interviewee role).
- Use simple icons and brief descriptions under each option to make the distinction between the roles clearer.

- **Design Vision:** Implement a two-column layout with each role option clearly separated.
- Add a brief description under each option to explain the differences.
- Use visual cues like icons representing “interviewer” and “interviewee” to make the selection process more intuitive.

4. Account Creation (After Role Selection)

- **Goal:** Guide the user to create an account based on their selected role.
- **Current Vision**: Once the user selects their role, redirect them to the account creation page.

Interviewee Account Creation Flow

1. Role Selection

- **Action:** After clicking "SignUp" on the home page, the user is asked, "How do you want to use MockXpert?".
- **Selection:** The user selects "I'm here to get interviewed".
- **Next Step:** The system redirects the user to the Interviewee Account Creation page.

2. Account Creation Page

- **Goal:** The user fills out a form to create an account as an Interviewee.

2.1 Basic Details

Fields:

- **Name**: Text input for the user's full name.
- **Email**: Email input for the user's email address.
- **Password**: Password input with validation for strong password (Password rules can be determined).
- **Confirm Password**: Confirmation field for password validation.

2.2 Field of Interest

Fields:

- **Current Role/Title**: Text input for the user's current role (e.g., Software Engineer, Data Scientist).
- **Field of Interest**: Dropdown menu or text input for the field the interviewee is interested in (e.g., Frontend Developer, Backend Developer, Product Manager).

2.3 Optional Fields

Resume Upload (Optional):

- **Action**: The user can upload their resume (optional) to provide more background for interviewers.
- **File Formats:** Accept PDF, DOCX files only.

2.4 Terms & Conditions

- **Checkbox**: The user must agree to the terms and conditions before creating an account (Terms and conditions can be determined later).

3. Email Verification

- **Action**: After submitting the form, the user receives an email verification link.
- **System**: The system sends a verification email to the email provided during registration.
- **Next Step**: The user clicks the verification link in their email to activate their account.

4. Account Activation

- **Action**: Upon clicking the verification link, the user's account is activated.
- **System**: The system redirects the user login page after successful activation. Now user is allowed to login to the platform.

5. Interviewee Dashboard

- **Action**: After account activation, the user lands on the Interviewee Dashboard.
- **Dashboard View**: (Detailed flow can be found on interviewee dashboard flow)
- A welcome message and brief guide on how to start booking interviews.
- A search bar to look for interviewers based on role, experience, and availability.

Interviewer Account Creation Flow

1. Role Selection

- **Action**: After clicking "SignUp" on the home page, the user is asked, "How do you want to use MockXpert?".
- **Selection**: The user selects "I'm here to interview".
- **Next Step**: The system redirects the user to the Interviewer Account Creation page.

2. Account Creation Page

- **Goal**: The user fills out a more detailed form compared to the interviewee to establish their credentials as an interviewer.

2.1 Basic Details

Fields:

- **Name**: Text input for the user's full name.
- **Email**: Email input for the user's email address.
- **Password**: Password input with validation for a strong password (Password rules can be determined).
- **Confirm Password**: Confirmation field for password validation.

2.2 Professional Information

Fields:

- **Current Role/Title**: Text input for the interviewer's current role (e.g., Senior Software Engineer, Product Manager).
- **Company**: Text input for the current or most recent company they are/were working for.
- **Years of Experience**: Dropdown or text input to select the number of years of professional experience.
- **Skills/Expertise**: Multi-select dropdown or tag-based input for listing areas of expertise (e.g., React.js, Java, Data Science, etc.).
- **Session Rate**: Input for the session rate they charge for interviews.

2.3 Additional Credentials

Fields:

- **Upload LinkedIn Profile (Optional):** Option to provide a LinkedIn profile link for added credibility.
- **Upload Resume (Optional)**: Option to upload a resume or portfolio file to showcase further details about their professional background.

2.4 Verification

Fields:

- **Upload Proof of Experience:** Option to upload documents (Documents can be determined) to verify their experience.
- **Admin Review:** This document will be reviewed by an admin before the account is approved for interviewer status.

2.5 Terms & Conditions

- **Checkbox**: The user must agree to the terms and conditions before creating an account (Terms and conditions can be determined later).

3. Email Verification

- **Action**: After submitting the form, the interviewer receives an email verification link.
- **System**: The system sends a verification email to the email provided during registration.
- **Next Step**: The user clicks the verification link in their email to activate their account.

4. Account Review by Admin

- **Goal**: Before the interviewer can begin conducting interviews, their account must be verified by an admin.

- **System**: Once the user verifies their email, the system flags the account for admin review based on the uploaded proof of experience.
- **Admin** Actions:
- The admin reviews the uploaded documents and the professional information.
- If approved, the account is fully activated with verified symbol, and the interviewer can start setting their availability and accepting interview bookings.
- If rejected, the admin can notify the user to provide additional information.

5. Account Activation

- **Action**: Once the account is verified by the admin, the user is notified via email and can log in to the platform.
- **System**: Redirects the user to the Interviewer Dashboard upon first login.

6. Interviewer Dashboard

- **Action**: After account activation, the user lands on the Interviewer Dashboard.
- **Dashboard View**: (Detailed flow can be found on interviewer dashboard flow)
- A welcome message and brief guide on how to set their availability and start conducting interviews.
- Options to manage their profile, set interview availability, view feedback from previous interviews, and manage their session rate.

Admin Registration and Login Flow (Using Firebase)

1. Admin Role Setup in Firebase

Step 1: Pre-define Admins:

- Admins can either be pre-defined by platform owner or granted admin rights after registration.
- Need to use Firebase Custom Claims to assign admin rights to specific users.

Step 2: Assign Admin Role:

- Once a user is identified as an admin, they will be assigned an admin custom claim in Firebase, differentiating them from interviewers or interviewees.

2. Admin Registration

2.1 Admin Pre-Registration (Controlled Access)

Option 1: Manual Admin Setup by Platform Owner:

- Since admins typically have more sensitive access, owner may want to create admin accounts manually.
- The platform owner (or super admin) can create an account for admins in Firebase Authentication and assign them the admin role using custom claims (explained below).

Option 2: Admin Registration with Invite System:

- Alternatively, admins can self-register, but their access will be restricted until their role is confirmed as “admin.”
- Admins would complete the registration process similarly to interviewers and interviewees, but an existing admin or platform owner will need to approve their status as “admin.”

2.2 Assigning Admin Role (Firebase Custom Claims)

- **Action**: Once a user is registered, the super admin (or platform owner) assigns them an admin role using Firebase Custom Claims.
- **Admin Panel**: Owner can create a simple admin panel where existing admins or platform owners can upgrade a regular user's role to "admin."
- This custom claim will allow Firebase to manage the user's access rights based on their role in the platform.

3. Admin Login

3.1 Login Process

- **Action**: The admin logs in using Firebase Authentication with their credentials (email/password or Google sign-in).
- **Login via Firebase Authentication**: The same login flow used for interviewers and interviewees is applied to admins, but their role is checked through Firebase custom claims.

Step 1: Firebase Verifies the Credentials:

- Once the credentials are validated, Firebase issues an ID token (JWT) to the admin, just like it does for other users.

Step 2: Custom Claim Verification (Admin Role):

- After the ID token is generated, the backend (Spring Boot) checks the custom claims in the Firebase token to verify if the user is an admin:
- If the token contains "role": "admin", the user is granted admin access and redirected to the admin dashboard.
- If the user doesn't have admin claims, they are denied access to the admin dashboard.

4. Admin Dashboard

- Once the admin is logged in, they gain access to the Admin Dashboard, where they can manage specific admin tasks:

4.1 Admin Dashboard Features:

View Pending Interviewer Verifications:

- Admins can view a list of interviewers with a "not verified" status and their uploaded proof of employment.
- They can approve or reject interviewers, and Firebase Firestore will update their verification status (verified: true).

User Management:

- Admins can search, view, and manage all users (interviewees, interviewers).
- Admins can deactivate or delete users if needed.

Monitor Activity:

- Admins can view logs of interviews booked, feedback received, and overall platform usage (tracked using Firebase Analytics).

Manage Content:

- Admins can manage platform content, such as guidelines, FAQs, and other static information accessible by all users.

4.2 Role-Based Access Control (RBAC)

- **Admin Privileges:** Only users with the admin custom claim can access the admin dashboard and manage verification, user approvals, and content.
- **Regular Users (Interviewers/Interviewees):** These users won't have access to the admin dashboard and will only be able to interact with interview-related features.

Forgot Password Flow

Common Flow for All Users (Interviewees, Interviewers, Admins)

- Since Firebase Authentication handles user authentication across all roles (interviewee, interviewer, and admin), the forgot password flow is the same for each user type. However, the access to the platform will differ based on the role (e.g., admins will access the admin dashboard, interviewers access the scheduling features, etc.).

Forgot Password Flow (General)

Step 1: Initiate Password Reset

- Action: The user (interviewee, interviewer, or admin) clicks on the "Forgot Password" link on the login page.
- This option is available on the login page for all users.
- Input: The user is prompted to enter their registered email address associated with their account.

Step 2: Firebase Sends Password Reset Email

- Action: Firebase Authentication sends a password reset email to the user's email address.
- The email includes a secure link that allows the user to reset their password.
- Content: The email contains a message and instructions, like:
- "You requested to reset your password. Click the link below to set a new password."

Step 3: User Clicks on Password Reset Link

- Action: The user clicks on the link in the email to open the password reset page.
- This page is hosted by Firebase, and it will allow the user to securely set a new password.
- Security: The password reset link expires after a certain time (usually 1 hour) for security reasons.

Step 4: Set New Password

- Action: The user enters and confirms their new password on the Firebase password reset page.

Step 5: Confirmation

- Action: Once the new password is set, the user receives a confirmation message, either in the email or on the page, indicating that their password has been successfully reset.
- System: Firebase updates the password in the backend.

Step 6: Login with New Password

- Action: The user is redirected to the login page. They can now log in using their new password.

Interviewee Flow within the MockXpert application

1. Dashboard (After Login)

- **Action**: After logging in, the interviewee is directed to their dashboard.
- **Dashboard Overview:**
- Upcoming Interviews: Displays any scheduled interviews with details like interviewer name, date, and time.
- **Interview History:** A section where the interviewee can view past interviews and feedback received.
- **Search Bar:** A prominent search bar to look for interviewers.
- **Profile Section:** An option to update personal information such as name, field of interest, and uploaded resume.
- **Next Step:** The interviewee can either search for an interviewer or view their interview history.

2. Searching for Interviewers

2.1 Search Bar

- **Action:** The interviewee clicks on the search bar and inputs filters such as:
- **Company:** The user selects the company they are interested in.
- **Role:** The user filters interviewers by job roles (e.g., software engineer, product manager).
- **Years of Experience:** Filter based on the interviewer's years of professional experience.
- **Price:** Set a range of prices based on the interviewer's session rate.
- **Rating:** Choose interviewers based on their ratings and reviews.
- **Availability:** Filter by interviewers who are available on specific dates or time slots.
- **System:** The system returns a list of interviewers based on the selected filters.

2.2 Viewing Interviewer Profiles

- **Action:** The interviewee clicks on an interviewer's profile to view more details.
- **Profile Overview:** The interviewer's bio, company experience, skills, rating, and past reviews.
- **Availability:** Display available time slots for scheduling an interview.
- **Next Step:** The interviewee clicks "Book Interview" to proceed with scheduling.

3. Booking an Interview

3.1 Select Time Slot

- **Action:** The interviewee selects an available time slot based on the interviewer's calendar.
- **System:**
- The system ensures that the selected slot is available (real-time check to avoid double booking).
- Time zone differences are automatically handled by the system to avoid confusion.

3.2 Payment

- **Action:** The interviewee is prompted to pay for the interview using Stripe.
- **Payment Details:** Enter card details and confirm the payment.
- **System:** After successful payment, the system:
- Sends a confirmation email with the booking details.
- Updates the interviewee's dashboard to display the upcoming interview.
- Generates a Google Meet link for the interview, added to both the interviewee's and interviewer's calendars (via the Google Calendar API).

3.3 Booking Confirmation

- **Action:** The interviewee receives a booking confirmation, and the interview is displayed in the upcoming interviews section on the dashboard.
- **Reminder Notifications:** The interviewee receives reminder notifications via email or SMS (depending on preferences) 1 hour before the interview.

4. Pre-Interview Preparation

- **Action:** The interviewee can view the upcoming interview details, including the Google Meet link, and review the interviewer's profile for additional preparation.

5. Post-Interview Flow

5.1 Feedback

- **Action:** After the interview, the interviewee is prompted to provide feedback on the interviewer.
- **Rating Criteria:** The interviewee rates the interviewer on:
- Professionalism
- Knowledge
- Clarity
- Helpfulness
- **Optional Written Feedback:** The interviewee can leave a detailed review of their experience.

System:

- The system stores the feedback and updates the interviewer's profile with the new rating and review.

5.2 View Interview History

- **Action**: The interviewee can view past interviews in the interview history section.
- **Interview Details**: Each entry includes the interviewer's name, date, time, and the feedback given.
- **Rebook**: The interviewee can rebook the same interviewer for future sessions if desired.

6. Profile Management

6.1 Update Profile

- **Action**: The interviewee can access their profile from the dashboard to update personal information.

Editable Fields:

- Name
- Email
- Field of Interest
- Uploaded Resume (optional)
- **System:** Updates the profile and reflects the changes immediately in the system.

6.2 View/Edit Account Settings

- **Action**: The interviewee can manage their account settings, such as:
- Change Password
- Notification Preferences (Email/SMS for reminders and updates)
- **System:** Updates the account settings and preferences in real time.

Interviewer Flow within the MockXpert application

1. Dashboard (After Login)

- **Action:** After logging in, the interviewer is directed to their dashboard.
- **Dashboard Overview:**
- **Upcoming Interviews:** Displays any scheduled interviews with details such as the interviewee's name, date, and time.
- **Interview History:** A section where the interviewer can view completed interviews and feedback provided by interviewees.
- **Profile Section:** Options to update professional details such as work experience, skills, pricing, and resume.
- **Set Availability:** A feature to manage available time slots for interviews.
- **Next Step:** The interviewer can either set their availability, view their upcoming interviews, or update their profile.

2. Setting Availability for Interviews

2.1 Manage Schedule

- **Action**: The interviewer clicks on the Set Availability option to manage their weekly or monthly schedule.
- **Input**: The interviewer selects the days and times they are available for interviews.

System:

- The system updates the interviewer's schedule in real-time.
- This availability is displayed to interviewees when they search for interviewers.

2.2 Time Zone Support

- **Action**: The interviewer can set their time zone, and the system adjusts the displayed availability accordingly for interviewees in different locations.

3. Viewing and Managing Upcoming Interviews

3.1 View Upcoming Interviews

- **Action**: The interviewer clicks on the Upcoming Interviews section to see details of scheduled interviews.
- **Details**: The interviewee's name, interview date and time, and the Google Meet link generated by the system (via the Google Calendar API).

3.2 Interview Preparation

- **Action**: The interviewer can review the interviewee's profile, which includes information such as their current role, field of interest, and uploaded resume.

4. Conducting Interviews

4.1 Join the Interview

- **Action**: At the scheduled time, the interviewer clicks on the Google Meet link from their dashboard to join the interview.
- **System**: The link is integrated with Google Calendar, and reminders are sent to both the interviewer and interviewee before the session.

4.2 Interview Time Management

- **Action**: The interviewer conducts the interview within the allocated time, as set during booking (e.g., 30 or 60 minutes).

5. Post-Interview Flow

5.1 Providing Feedback

- **Action**: After the interview, the interviewer is prompted to provide feedback on the interviewee.
- **Rating Criteria:** The interviewer rates the interviewee on factors such as:
- Preparation
- Technical Skills
- Communication
- Overall Performance
- **Optional Written Feedback:** The interviewer can leave written comments for the interviewee to help them improve.

System:

- The system stores the feedback, which is visible in the interviewee's dashboard.

6. Profile Management

6.1 Updating Professional Information

- **Action**: The interviewer can update their profile by adding new experiences, adjusting their session rate, or adding new skills.

Editable Fields:

- Experience (e.g., companies worked at, roles, years of experience).
- Skills (e.g., technical skills, soft skills).
- **Session Rate:** The interviewer can update their pricing for interview bookings.
- **System**: The system updates the interviewer's profile, which is reflected in the search results and on their public profile page.

6.2 View/Edit Account Settings

- **Action**: The interviewer can manage account settings such as:
- Change Password
- Notification Preferences (e.g., receiving reminders via email or SMS).
- **System**: Updates are applied to the interviewer's profile and account preferences.

7. Viewing Interview History

7.1 Access Completed Interviews

- **Action**: The interviewer clicks on the Interview History section.
- **Details**: View past interviews with interviewees, including the date and time, and the feedback provided.

7.2 Rebooking or Reviewing Interviewees

- **Action**: The interviewer can review the feedback they provided for interviewees or choose to rebook a previous interviewee.

8. Handling Payments

8.1 Earning from Interviews

- **Action**: The interviewer can track their earnings from completed interviews.
- **System**: Payments for completed interviews are processed via Stripe, and the interviewer's dashboard reflects the total earnings and transaction history.

9. Verification Management (Initial Phase)

9.1 Not Verified

- **Action**: When the interviewer first creates an account, they are marked as “Not Verified” and cannot schedule interviews until they are approved by an admin.
- The interviewer is prompted to upload proof of employment or experience (e.g., an offer letter, employment certificate).
- **Next Step:** Once an admin verifies the interviewer, they gain full access to the platform and can create a schedule and begin accepting interviews.

Admin Flow within the MockXpert application

1. Admin Dashboard (After Login)

- **Action**: After logging in, the admin is directed to their Admin Dashboard.
- **Dashboard Overview**:
- **Pending Verifications**: Admins can view a list of interviewers awaiting verification.
- **User Management**: Basic user details like names, emails, roles (interviewer/interviewee), and verification statuses.
- **Platform Metrics (if tracked via Firebase Analytics)**: Basic stats like the number of registered users and active interviewers.
- **Firebase Integration**: Firebase Firestore or Realtime Database stores all user data, including roles, verification status, and other profile information.

2. Verifying Interviewers

2.1 View Pending Interviewers

- **Action**: The admin clicks on the Pending Verifications section to see all unverified interviewers.
- **Data Source:** Stored in Firestore, the interviewers' profiles include:
- Uploaded proof of employment (e.g., a URL to a file stored in Firebase Storage).
- Basic information like name, role, and requested verification date.

2.2 Approve or Reject Verification

- **Action**: Admin reviews the uploaded proof and decides whether to approve or reject the interviewer.
- **Approve**: The admin marks the interviewer as verified: true in the Firestore database.
- **Reject**: If the admin rejects the verification, the interviewer remains verified: false.
- **System Update**: Firebase updates the interviewer's profile, allowing them to access interview scheduling only if verified.

3. Managing Users

3.1 View and Search Users

- **Action**: The admin accesses the User Management section to view all registered users.
- **Data Source**: Firestore or Realtime Database stores user profiles, including roles (interviewer/interviewee/admin) and verification status.
- **Search Filters**: Admins can filter users by role, verification status, or search by name/email.

3.2 Deactivate or Delete Users

- **Action**: Admins can manage users in the following ways:
- **Deactivate**: Admin updates a user's profile in Firestore to set them as inactive (e.g., active: false), preventing them from logging in.
- **Delete**: Admin deletes the user's profile from Firebase Authentication and Firestore, removing their access to the platform.

4. Platform Metrics (Basic)

4.1 View Platform Activity

- **Action**: The admin clicks on the Platform Metrics section to view user activity.
- **Metrics Source**: Firebase Analytics tracks:
- Total registered users.
- Total active interviewers.
- Events like logins, bookings, and feedback submissions.

5. Notifications

5.1 Automated Notifications (Optional)

- Firebase Cloud Functions can be used to trigger notifications for admins, such as:
- New Interviewer Registrations: Alerts admins when a new interviewer registers and needs verification.
- Account Status Changes: Notify admins if user accounts are deactivated or deleted.

5.2 User Notifications

- Admin-Initiated Notifications:
- Firebase Cloud Messaging (FCM) can be used to send in-app or web push notifications to interviewers or interviewees for:
- System updates.
- Policy changes.
- Maintenance notifications.

6. Handling Complaints or Issues (Limited Firebase Scope)

- Firebase doesn't natively support full issue-tracking functionality like disputes or complaints, but admins can use Firestore to manage a basic reporting system where users can submit issues, and admins can respond by updating status fields or sending notifications.

7. Logging Out

7.1 Log Out

- Action: The admin logs out using the Logout option.
- Firebase Authentication: Ends the session and logs the admin out securely.
